

- The China State Information Center (SIC) is an institution affiliated with the National Development and Reform Commission of China, engaged in research on the macroeconomy, key industries, and information technology. It is an important think tank. The Business Consulting Center, a division of SIC specializing in auto market/industry research, was founded in 1987. It is the oldest auto research institution in China. Mr. Xu Changming serves as its Director-General. Currently it has a professional auto research team of over 70 staff members, providing auto industry and market consulting services for the government, major auto makers, and most of the multinational corporations. The analysis of BCC, especially the forecast on China's auto market, is regarded as an industry standard.
- SIC leads in research strength and resources in the medium and heavy- duty truck field. There are professional research teams on the macroeconomy and medium- and heavy-duty truck market, who have conducted research and tracking for a number of years. SIC sets the bar for research in China. SIC has a cooperative relationship with relevant government departments, major enterprises and dealers, multinational corporations, and major domestic survey companies. These form the 10 resource systems of SIC, ensuring unique advantages in information collecting and integration.
- In 2008 SIC established a cooperative relationship with ACT in commercial vehicle market research, including expanding the exchange of CV market information, participating in each other's conferences, and marketing of some of each other's products. The *China Commercial Vehicle Demand Outlook* is an important cooperative effort of SIC and ACT. It provides an in-depth analysis of China's macroeconomy as well as the medium- and heavy-duty truck market, and, based on that, makes a forecast on China's macroeconomy trend and medium- and heavy- duty truck market sales. The report also includes a competitive analysis on major OEMs
